

**Excellence in Training, Doctrine, and
Combat Development**

Sheila Smith

**Armor ASAT Program
Manager**

Preventing Global Lock Outs

- Two Types of global lock outs
 1. Every local user in your database is inactive.
 2. Your database takes on another schools identity.
- What causes these global lock outs?
 - Directly importing information from another school into our working database- the sharing of information.
- The Armor School prevents global lock out by:
 - Never importing directly into the working database.
 - Removing all users except the ASAT System Administrator and the Reviewer from the transfer database prior to importing the information into our working database.

School Identity Theft

- The Armor School utilized Infomaker to recover our identity; change the school codes back to Armor.

School Identity Theft continued

Sample of the Armor Schools database site id information from In

scho ol	product propon- ent	versio n	version dt	remote databa se	last dail y dt	last mont h-ly dt	pswd chg perio d	req chg histor y text cd
171	17	4.44	3/29/2005	Y			180	N
171	71			N			0	

School Identity Theft

continued

Or you can use the “isql.exe” method.
However, my recommendation for a
lock out that is associated with school
identity theft is to contact:

ATSC ASAT Manager, Elaine Tarr

(757) 878- 4762, Ext 7044

DSN: 826- 4762, Ext 7044

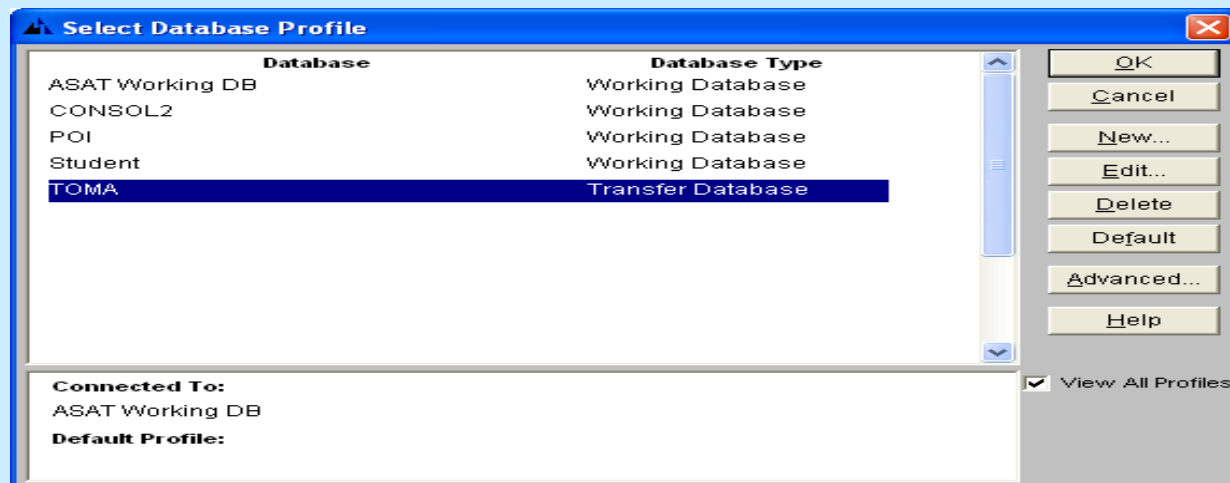

FAX: (757) 878-4140

elaine.tarr@us.army.mil

Armor School Import Steps

- 1. Take the transfer database (from another school or contractor) that was created using the steps Elaine presented earlier, and connect to it to review the data.**
- 2. Since ASAT defaults to your working database, to connect to your transfer database on the power panel select File, attach to other databases. In my example below, I have created a “TOMA” profile.**

Armor School Import Steps

continued

- 3. Logon to the transfer database as the Administrator (use id: admin and password: asat).**
- 4. When prompted to change the password, change the password.**
- 5. Select “System Admin” on the ASAT Power Panel. Select “ASAT User Administration”.**
- 6. Filter by clicking “All”. This will bring up the ASAT User Maintenance Screen with every user**

Armor School Import Steps continued

7. At the User Maintenance Screen, remove all users except the ASAT System Administrator and Reviewer by:

-- From the file menu, select data then “select/deselect record” (the record will turn blue when selected). Then select data delete record. You can delete several records at a time by holding the shift key and clicking on records.

Benefits of utilizing a transfer database

- **It prevents your active users from becoming inactive (locked out)**
- **It prevents your working database from taking on another schools identity/school codes. NOTE: If your database takes on another school's identity every user including your administrators and any administrative back doors will be disabled.**
- **If the information you are importing is corrupt you will not corrupt your active database.**

Benefits of utilizing a transfer database

continued

- **You are able to choose specific items you want to import into your working database.**
- **You are able to remove outdated facilities, products, TADSS, and other items that appear under the support tab.**
